

Small American Organ disposition for jOrgan 3.11.1 Fluidsynth “engine”

This is a small chapel 2x61note m/32ped organ model, based on American pipe organs found in small churches all over the States, very good for practice or choral work and service. *Two dispositions available*, one with 16:9 screen and one with 4:3, for all tastes :-)

Has very clean sound, 13 stops made with Audacity and Viena and 8 couplers for extra power. Two tremulants added one for each manual.

A special non dropping Mixture IV was made for great organ and even if there's no Principal 8', a very nice plenum or tutti can be modeled even with Sesquialtera II on ! Special Krummhorn & Fagott reed stops introduced.

A very special Zimbelstern stop is introduced for the first time in any of my dispositions and the .wav file , perfect looped, was sent to me by my good friend JayR from the US, Thank you Jay !

A *blower noise effect* created and every time SAO is opened, this blower turns on ! A nice effect provided one leaves the specific stop open (save..) before closing jOrgan.

Standard draw stop effects, swell pedal, crescendo pedal, recorder and memory included , but no special skin, just wanted to go back to the classic jOrgan skin, to enjoy its simplicity but also its great functionality on a classic organ model .

Group element, keyer, activator, synchronizer and most of the advanced features of jOrgan are used in advantage.

Great thanks to Lynn Walls for full testing the organ before release and helping me solve an issue my eyes couldn't see even if I was lookin' at !

Thank you Lynn !

Great thanks to my friend Marco Francesco also for testing but mostly for playing and recording Ave Maria. His .mid file included, enjoy !

Thank you Marco !

Disposition created and dedicated to my friend Graham Goode for his friendship and his affection and love for pipe organs, and for our common quest for better VPOs and the evolution of them into higher quality levels. His never asking for anything help is invaluable and I cannot imagine a VPO world without him.

Thank you Graham.

Small American Organ 3.11.1FS provided as is under GPL v.2 and is free made with free apps and not for sale and commercial distribution. I would be pleased to hear recordings, midi files and/or live performances with it.

Enjoy !
