

## Baroque 1man/ped organ tester disposition for jOrgan v.3.11 beta2 - Fluidsynth

---

This disposition is made for testing the new 3.11 beta2 version of jOrgan, with the use of real pipe samples.

I used just two presets in the included sf2 bank, 16 stereo samples from real Silbermann pipe organs' stops.

I spent much time looping the relatively short samples I got from Germany, for just two real stops !

I believe they sound great now.

This work also kept memory low.

Tester has more stops though :

- Subbass 16'

- Principal 8'

- Principal 4'

- Quinta 3'

- Octav 2'

- Tertia

- Mixtur

made with just two presets (Principal8 & Mixtur), showing the power of jOrgan. Classic skin and a meantone(-1/4) tuning switch complete the tester.

Baroque 1m/p organ tester is free, but the use of it and its sf2 bank is strictly allowed for testing jOrgan only ! Use the disposition at your own risk.

Have fun !
