

## Harmonium Disposition for jOrgan software v.3.14

---

This is decent harmonium emulation for jOrgan and I believe the first one shared for this software.

Also harmoniums/reed organs for modern computers are rare and so far, two or three versions for N.I.Kontakt, two sets for Hauptwerk and a VSTi from Russia, are the ones that came to my knowledge.

There are some free sf2 banks around, mostly accordions, I found on sf2midi.com and used for the creation of this Harmonium.sf2 as basic sound source for this disposition.

The ones finally used - reworked are :

Pump Organ.sf2, Campbell' s Accordion.sf2 and bandoneon.sf2

Main photo, is from Wikipedia\reed, pump organs.

Two modules are present, reverb and chorus, as the usual recorder (midi) & memory for the presets. I added a swell pedal (not original).

I couldn't find any usable pumping pedal effects to include.

Worth noting is that the Vox Humana stop is actually a tremulant and Voix celesta a classic Salicional. I followed Mason & Hamlyn's disposition on presenting the stops here. Stop icons came from this pump organ on Wiki.

Three disposition files are inside, default Directsound, one for Asio and one for WASAPI, using Graham Goode's essential extensions found here :

and here :

<http://jorgan.999862.n4.nabble.com/jOrgan-User-f999863.html>

Harmonium 3.14 is provided as is, under GNU v3 and is free and not for commercial distribution and sales. I hope you'll find it useful.

Feel free to contact me for any reason.

Enjoy,

All my best

Panos K. Ghekas, Athens, Nov 2011
