

Długa Kościelna Organ Version 1.0 for jOrgan 3.20

The Długa Kościelna Organ Version 1.0 for jOrgan 3.20 is based on the [Hauptwerk / GrandOrgue samplesets prepared by Piotr Grabowski](#).

The jOrgan version has the following features:

- A full set of divisional and general combinations.
- An Auto-Pedal to HW coupler.
- Flexible wind simulation (requires all keyboards to be referenced in the jOrgan MIDI merger)
- Stop action, key action and blower effects.
- Fluidsynth reverb
- Panic switch (clicking on the jOrgan logo cancels all held notes on all keyboards)
- Temperaments (Equal and Bach-Lehman)
- Tuning adjustment allows the organ to be tuned to other instruments. The tuning adjustment presets also allow the organ to be tuned to its original pitch (OP) or to A = 440 (440)

- Fluidsynth Reverb is included, which approximates the acoustics of St. Anne's Church in Długa Kościelna. Because of the limitations of Fluidsynth reverb, we recommend a medium length bright impulse response of about 2.5 seconds. Openair's "[Lady Chapel, St. Alban's Cathedral](#)" would give a pleasing result.
- For more information on the Długa Kościelna Organ, refer to the html page which was included in Piotr Grabowski's original samplesets.

You can donate to help Piotr Grabowski with his organ sampling projects through Paypal or Skrill through his [donation page](#).
